

Deployment Instructions and Troubleshooting Guide

Deployment Instructions

1. Extract the contents of the deployment_package.zip file.
2. Ensure you have Node.js and npm installed on your system.
3. Navigate to the project directory in your terminal.
4. Run the following commands:
 - a. Install dependencies: `npm install`
 - b. Build the project: `npm run build`
 - c. Deploy the application: `./deploy.sh`
5. Follow the prompts during deployment to log in to Vercel if required.

Troubleshooting Suggestions

1. Missing Module Error:
 - Ensure all required files are present in the src directory.
 - Check for typos in import statements.
2. Vercel Login Issues:
 - Run ``vercel login`` to authenticate before deploying.
 - Ensure your credentials are correct and saved.
3. Build Errors:
 - Verify that all dependencies are installed by running ``npm install``.
 - Check the tsconfig.json file for correct TypeScript configurations.

Deployment Instructions and Troubleshooting Guide

4. Deployment Failures:

- Ensure the `vercel.json` file is correctly configured.
- Check the Vercel dashboard for detailed error logs.
